AlmaBridge - Building Bridges Across Generations

1.2 Supervisor

Dr. Faiza Iqbal

1.3 Description

One of its kind, AlmaBridge, will serve as a synaptic point on how the alumni and students connect. The first and foremost goal would be the digitalization of maximum alumni data through data provided by the university and the scrapping of different social media platforms like LinkedIn. After data collection, the primary motive would be to set up a connection between alumni and students through a web app developed through the latest technologies. It's an all-in-one platform where students can get guidance from experienced alumni, have engaging chats, and discover unique opportunities. What truly sets AlmaBridge apart are its features: safe chat keeps conversations clean, smart language helps ensure smooth communication and AI-powered matching connects students with ideal alumni mentors. AlmaBridge is poised to be a game-changer in fostering collaboration and a thriving university community.
